

HITACHI

Outage Planning and Analytics (OPA)

Outage Planning and Analytics is a software solution focused on maximizing the outcome of the entire nuclear refueling outage process including **planning, scheduling and execution.**

Designed by experts in the nuclear industry ... for the nuclear industry.

10%

reduction in outage variability with multiple sites employing a single standard to help bring outliers back to the mean.

Virtual

outage control center in a safe, secure and export-controlled compliant environment – outage readiness for all.

1

source for outage information and data, eliminating the need for other IT system management.

~1/3

of the professionals in the nuclear sector are **55 or older***; employing OPA reduces the risk of losing their accumulated knowledge.

>10,000

outage activities can overwhelm outage teams and lead to errors, but analytics can quickly identify areas that otherwise might be overlooked.

50+ years

of outage experience incorporated into OPA.
